Publishers	189

IndexCopernicus™ Evaluation Methodology 2007

Stage 1. Detailed Parametrical analysis

Following groups of parameters are being evaluated:

– Scientific quality	580 base points	(58.0%)
– Editorial quality	200 base points	(20.0%)
– International availability	135 base points	(13.5%)
– Frequency-Regularity-Stability	50 base points	(5.0%)
– Technical quality	35 base points	(3.5%)
Total	1000 base points	(100.0%)

Stage 2. Negative score analysis

Negative score is given for:

- irregular or late issuance [late up to one publishing period (-30), joint issues (-50), late more than one publishing period (-60)];
- non-ethical advertisement placement [within article (-60), directly before/after article (-40)].

Stage 3. Experts peer-review

Experts peer-review of evaluated journals change the total score by ± 60 points (12%):

- Scientific significance of the published material [± 20],
- Up-to-date content [± 20],
- Educational value [± 20].

How do we calculate Index Copernicus Value (ICV)

First, Base Points (BP) are converted into 10 points Total Basic Score (TBS), then:

- A) For journals indexed in Current Contents Index Copernicus Value (ICV) is being calculated based on the following formula:

$$9 + [(TBS) \times (IF)] \text{ (where IF = impact factor value).}$$

This formula ensure that the journals indexed at Current Contents have minimum ICV=10 points.

- B) For the rest of journals which are NOT indexed in Current Contents **TBS=ICV**

I. Scientific Quality

The following parameters have been evaluated:

- International indexation. Three levels of indexation has been defined:
 - Basic level – indexation in international bibliographic databases EXCEPT Index Medicus/MEDLINE and Current Contents.
 - MEDLINE level (indexation at Index Medicus/MEDLINE). The score can be lowered if a journal does not deliver or is late with delivering XML files according to Medline requirements.
 - Indexation at Philadelphia Institute of Scientific Information's Master Journal List (based on impact factor). IF is used in the calculation algorithm of Index Copernicus Value (ICV) – see above.
- Annual percent of original research papers*

Original research paper is that, which presents results of empiric investigation (clinical or laboratory), which is divided into the following sections: background, material and methods, results, discussion, conclusions, references. The percentage of this original works published in a journal reflects its character (scientific or educational) and indicates the potential interest of researchers in publishing there.

- Number of papers published annually from centers outside the journal's country of origin*

Indirectly indicates a degree of journal's acceptance on international market. The more international publications – the higher the score.

- Number of all papers published on annual basis*

Reflects potential authorship and acceptance for the journal. Only papers published in regular issues are being considered. Papers published in special issues or supplements are not being counted as they are considered not to undergo the regular peer-review process. It is also being assessed if the papers published

in a journal come from a source associated with publisher or editorial board only, what lowers the IC score.
5. *International Editorial Board* adds to the score, for it creates a chance for further journal's development.

II. Editorial quality

1. Cover page [all the following items should appear clearly: journal's title, ISSN, frequency, volume/issue/part number, month/year].
2. The uniform composition of presented manuscripts compatible to journal's instructions for authors, forms the leading element of editorial quality. The following parameters are being evaluated:
 - a. Summary should count 200–250 words and have structural form, i.e. reflect structure of an article (background, material and methods, results, conclusion). Non-structural summaries counting less than 200 words lower the score.
 - b. Key words should not repeat the title of manuscript. The most desirable is to use key words from the MeSH catalogue.
 - c. Uniform presentation of original manuscripts. Research works should be divided to background, material and methods, results, discussion, conclusions, references.
 - d. References should be presented in consecutive order (as they are cited in the text). First six authors should be presented. Journal title abbreviations should be in Medline standard. Arab numbers in bracket or in upper index should mark citations in the text. Each citation item should be placed in a separate paragraph.

Alphabetical order, "en block" presentation or incorrect abbreviation of journals title lowers the score.

3. Information for authors should be included into each journal's issue, and should contain:
General rules of manuscripts evaluation process, disclosing conflicts of interest between referee-author, referee-research sponsor, author-research sponsor, patient's privacy rights and ethical issues in animal and clinical research (Editorial Policy).
4. Detailed editorial and technical information regarding manuscript preparation (Instruction for Authors)
5. Editorial information should include list of Editorial Board members, editorial correspondence address, name and address of a publisher, ISSN and frequency of issuance (monthly, quarterly)
6. Advertisements should be placed on editorial pages (at the beginning and/or at the end of a journal).
Advertisement within scientific content, i.e. before, inside and directly after an article is undesirable and lower the IC score.

III. International availability

International availability is important for proper development of a scientific journal. Two factors are taken into consideration:

1. Language of publication. English is preferable, since this is the universal language of science. Journals published in other languages should have full size (200–250 words) structural summaries in English and bilingual article title as well as table/figure subtitles.
2. Internet availability. Internet becomes an important medium for scientific publication and exchange of professional information. It is due to its global availability and speed and low cost of publication, comparing to printed journals. Internet availability enhances a chance to broaden journal's circulation and speeds up its development. The access to editorial information, table of contents, summaries and full text articles and search tools are evaluated. The preferred language of a Website is English.

IV. Frequency-Regularity-Market stability

This group of parameters is to assess the editor's publishing/managing efficiency. We evaluate:

1. Regularity of issuance, which is an important factor for journal's stability and one of the key evaluation parameter at other international indexing databases such as Medline and Current Contents. Journals of an irregular issuance, late, or those, which issue joint issues, receive a lower score.
2. We add score to journals depending on their continuous presence on the market.

V. Technical quality

Technical quality discloses the ability for proper presentation of the scientific content. The quality of pre-print process, especially desk top publishing (DTP), ability to print in color, and the quality of paper (acid-free is preferred) are evaluated. The A4 format of a journal is preferred.
